

U.S. DEPARTMENT OF
ENERGY

Solar Instructor
Training Network

Southeast Region

This newsletter is produced by the Southeast Solar Training Network (SSTN) for the purpose of supplying solar-related news to our educational and energy office partners. The goal of SITN is to help facilitate and support the creation of a well-trained and highly-qualified solar energy workforce of sufficient size and diversity to meet the projected workforce needs of the United States.

The Interstate Renewable Energy Council (IREC) is developing a national **Clean Energy Training Directory** which will be very beneficial to students seeking clean energy training. As part of the Southeast Solar Training Network, it would be extremely beneficial to have your institution's courses and programs included in this directory. Basically, all you have to do is go to the directory site (<http://www.irecusa.org/training-directory/>), create a new account, input the relevant information and submit. It is a very simple process.

Upcoming Training

Florida Solar Energy Center,
Cocoa, FL

Installing Photovoltaic Systems
[February 3-7, 2014]

Solar Water Heating Systems
[March 4-6, 2014]

For more course details, visit
